Marine Fiberglass Maintenance Checklist

BLG Fiberglass - Owner and Operator Guide 2026

Routine Surface Care

1. **Rinse after every use**

   Flush salt and grime before it etches the gelcoat.

2. **Wash and inspect**

   Marine soap, then feel and look for chalking and cracks.

3. **Compound, polish, wax**

   Restore oxidized areas and lay down a UV barrier.

4. **Refresh wax through the season**

   Reapply every few months and after heavy use.

Protect the Structure

1. **Rebed leaking hardware**

   Stop water reaching the laminate and core.

2. **Check below the waterline**

   Look for blisters that signal water intrusion.

3. **Tap-test suspicious areas**

   A dull thud can mean delamination or a wet core.

4. **Get structural issues assessed**

   Have a professional evaluate soft spots early.
